I am new to programming and I don't know how to deal with this situation. I am trying to write a program to find the longest side in a given array, "length". I should only print that value if the sum of the other two values of each array value are the same. Here is what I have so far:

```
public class LongestSide { public static void main(String args[]) { Scanner in= new Scanner(System.in); int[] array = new int[10]; for(int i=0; i length_1){ length=length_1; } if(length > length_2){ length=length_2; } } System.out.print(length); } }
```
